

Infor ERP FACTS: Pro Business Intelligence

With Pro Business Intelligence you can better understand your operations and make more informed business decisions.

The Pro Business Intelligence (Pro BI) solution takes data collected and stored in Infor ERP FACTS and turns it into meaningful information that you can use in your daily activities. With information in accessible reports and analysis, you can make better and more timely business decisions. It gives you the means to understand the "why" behind your business performance.

Pro BI delivers an affordable and fully integrated set of business intelligence capabilities so you can perform your own multidimensional analysis, create reports and easily share the results to make better decisions. Novice to advanced users across your company can explore large volumes of summarized data in seconds.

Pro BI draws information from your system database to model and build PowerCubes ("Cubes"). Cubes are optimized data sets that enable users to perform analysis with quick response times. These cubes can help you analyze multiple aspects of your business—to see how sales might change over time; how often inventory turns; how suppliers have performed and more. Below are just a few of the cubes available:

- > Accounts Receivable History
- > General Ledger Details
- > Open Accounts Receivable
- > Sales Analysis
- > Inventory Turns
- > Customer Returns
- > Open Accounts Payable
- > Purchase Order History
- > Sales Order Booking
- > New Customer Accounts

➔ A PARTNER SOLUTION ...

Developed by Earnest & Associates, an Authorized Infor Channel Partner, Pro BI is certified by Infor as a leading solution for Infor ERP FACTS. By selectively creating alliances with partners that maintain the same the same rigorous quality standards for programming, design and functionality, Infor provides our customers with an expanded and enhanced solution.

Easy-to-Use Analysis

The cubes allow users to engage in multidimensional analysis of their data by using point-and-click and drag-and-drop functionality to create dynamic, interactive reports. Three simple but powerful capabilities allow users to analyze information from any point of view:

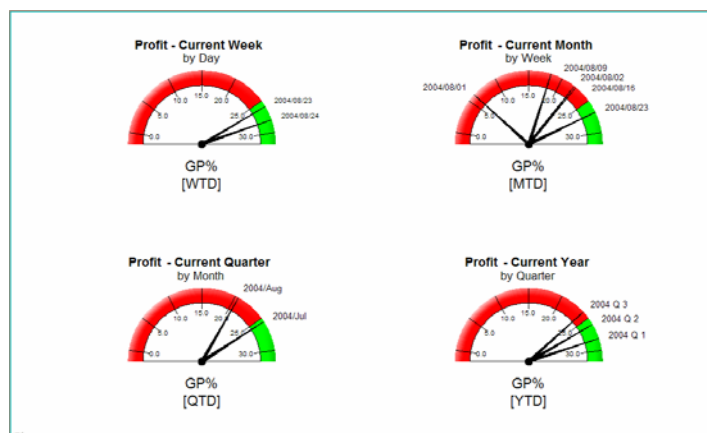

- Drill down: Gain fast answers to key information by easily moving from one level to the next
- Slice-and-dice: Interactively explore data in any combination, from every conceivable angle
- Graphical analysis: Choose from a wide range of graphical displays, making it easier to spot trends and understand the key factors driving the business

Data Exploration Features

- Ranking, sorting, and filtering: Quickly rank or sort data to determine your top-to-bottom, best-to-worst performers; the 80/20 filter automatically groups all categories that amount to less than 20% of a row total or column into an "other" category
- Drill through: Drill through to other related reports and cubes easily by clicking a link
- Projections: Forecast trends by extending current data forward a number of designated periods
- Exception highlighting: Automatic exception highlighting clearly shows values in a report that are above or below a value range
- Scenario Dimensions: Explore alternative scenarios, such as Actual, Plan and Forecast
- Find: Search for specific categories within cubes and reports

Visualizations Help Simplify Complex Data

The Pro BI solution uses sophisticated visual reports ("visualizations") to communicate complex business data quickly and intuitively. The display measures from multiple cubes simultaneously in an executive dashboard format using easy-to-read charts and graphs. When people view several reports at once, they can see how information correlates and make better decisions. Dashboard views, instant-impact visuals, aggregate displays, interactive exploration, flexible chart types allow for fully customizable displays with many options for style, color and layout.
