

AutoQuotes Integration

A Smart Solution for Food Service Distributors

Introducing the AQ Integration for Infor CloudSuite for Distribution & Infor SX.e v.11 Web

For 30 years, AutoQuotes software has empowered foodservice equipment manufacturers, distributors, dealers, and reps to simplify the sales process and work together to sell more, faster. The challenge has been all the project details were siloed within the AQ software and exporting projects to your ERP was a tedious, time-consuming and error prone manual process.

NOT ANYMORE.

Expertek has developed an integration tool that bridges the gap between AQ and Infor CloudSuite for Distribution and SX.e Version 11 Web. The result is a quick, seamless import of all the data from your AQ software including the project data, specs, pricing, notes and all other relevant details, organized in a clean, intuitive user interface within your Infor ERP.

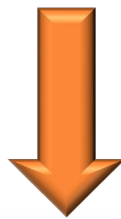

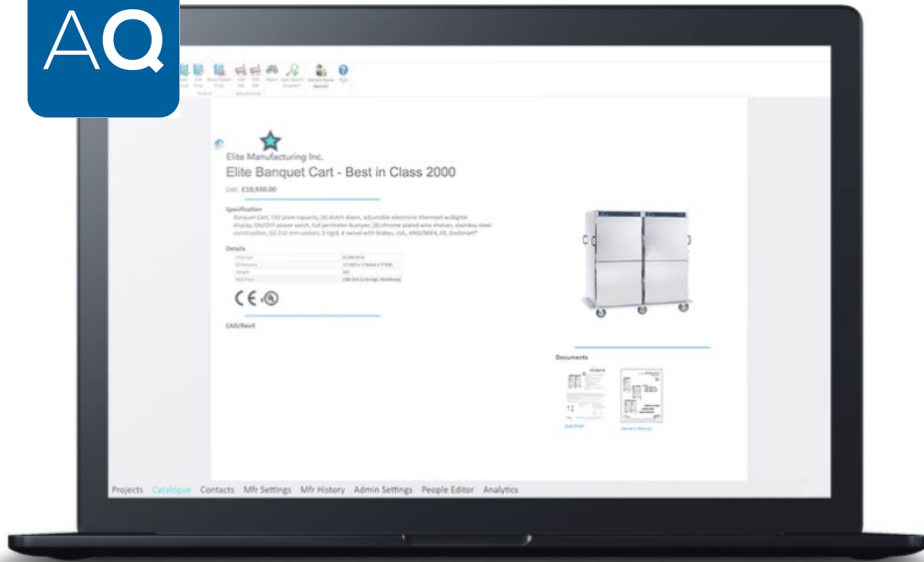

Save Time. Reduce Errors.

The gains in productivity are astronomical. Foodservice industry orders are often complex with dozens if not hundreds of line items including kits, options, stock and special-order items. Manually re-keying all that data was not only time consuming but error prone. With our integration, orders are entered once into AQ and that's it. Project data can be processed faster and with much greater accuracy meaning customer satisfaction goes up.

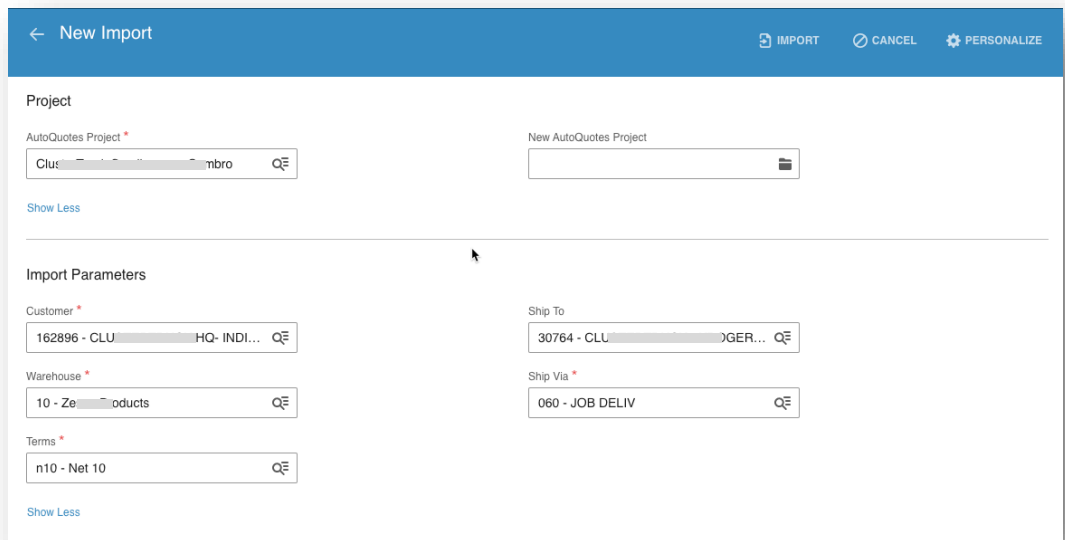

Key Features

- Import AQ projects to either quotes or direct-to-sales orders
- User can associate incoming AQ project with Infor customer and ship-to
- Configurable mapping layer
- Accommodates both stocked and non-stocked products
- Non-stocked items are automatically passed to purchasing for sourcing
- Handles non-stock kit components
- Support for order line comments
- Cross referencing for AQ to ERP vendors
- Built as an extension for forward compatibility with Infor CloudSuite for Distribution and SX.e v. 11 Web

With our seamless integration, your project information is imported directly from AutoQuotes into your instance of Infor CloudSuite or SX.e v. 11 Web. Our intuitive user-interface retains all the data, thereby eliminating hours of tedious, time-consuming manual data re-entry, to dramatically improve both productivity and accuracy.
